

# d-labs

detergent development & testing solutions

We provide complete detergent development and testing solutions across the entire product development chain. We can add expertise and value across the following technical disciplines:

# Product Development

At D-Labs, we provide complete end-to-end development and testing solutions for the household and industrial detergent product markets. Depending on your specific needs, we can manage one or all aspects of your project from ideation to market evaluation, product development, testing and claims support right through to manufacturing trials and quality assurance. Our aim, always, is to ensure your formulation meets the required cost, safety, performance and quality guidelines, so that your customers can shop in confidence.

Because our experience is in both pure academic research and development of commercial detergents and personal cleansing products, we have been able to develop a unique approach to product development and a keen understanding of the importance of product claims, cost and manufacturing issues. Our solutions are customised, comprehensive and designed to meet your specific company needs. No matter what your development needs, D-Labs will help you achieve your goal.

We deliver creative solutions for all aspects of the product development cycle such as:

- Analytical Benchmarking
- Idea Generation
- Product Development
- Stability Testing
- Performance Evaluation
- Claims Support
- Artwork Proof Reading
- Scale-up to Full Manufacture
- Routine Quality Testing
- Troubleshooting

When you partner with D-Labs, we become an extension of your team. We work closely with you to understand your specific needs, then provide a clear and customised work plan to achieve the desired outcomes. A key part of our project management is the ability to work with, understand and manage the specific requirements of all stakeholders (marketing, manufacturing and management) to achieve seamless flow and implementation.
