

d-labs

detergent development & testing solutions

We provide complete detergent development and testing solutions across the entire product development chain. We can add expertise and value across the following technical disciplines:

Test Materials

In order to ensure success in today's marketplace, it is critical to maintain customer confidence by consistently offering a quality product. This requires evaluation of the performance of the product during the product development phase, followed up by a robust quality control system that includes both chemical and performance testing. Because D-Labs offers an end-to-end service of product development and testing solutions, we understand the materials and equipment that you need to conduct appropriate testing of your detergents. D-Labs can provide a wide range of test materials, reagents and equipment to meet your needs.

D-labs offers a range of test materials essential for routine quality checks and development work in the detergent industry. We have sourced products from all over the world to meet your test requirements.

The range of test materials offered by D-Labs includes:

- Soiled standardised test materials for laundry, dishwasher and hard surface cleaners from:
 - CFT (Center for Testmaterials)
 - WFK
 - Swisstat (previously EMPA)
 - WarwickEquest
 - ConsumerTec
- Colour Care Fabrics
- White Sets
- Fabric Care Products
- Soils, Soil Ballast & Ballast Load Items
- Reference Detergents
- Equipment

When you partner with D-Labs, we become an extension of your team. We work closely with you to understand your specific needs, then provide appropriate products that will achieve the desired outcomes. A key part of our service is the ability to despatch most products quickly and efficiently from our local stock. We also offer a range of customised test strips and monitors to suit your individual requirements.
